

WOLF TALK

INTER-COMMUNICATIONS AND VOICE RELAY

ADVANCED RADIO BRIDGING AND INTERCOM CAPABILITIES IN A PLUG AND PLAY PACKAGE

Wolf Talk packages advanced tactical voice bridging for radios, cell phones, and audio sources with intercom capabilities to provide a solution for mobile command centers and advance teams.

Designed to meet the tactical needs of the highly connected modern force, Wolf Talk provides 12 channels that can be split dynamically between operators and radios/audio equipment (i.e. computer or cell phone). Each operator can monitor a dedicated talk group of audio sources and immediately connect with all other operators on the dedicated intercom.

FEATURES:

- Voice bridging among multiple audio channels of interest.
- Form factor compatible with industry leading modular chassis system.
- LED indicators for fast identification of channel utilization.
- Operator controls for volume and channel selection on both radio and intercom.
- Intuitive configuration GUI for building talk groups and assigning labels to channels.
- Quick export of audio configurations provides for seamless distribution among multiple units.

SPECIFICATIONS

- 12 flexible channels for operators and audio sources.
- Compatible with industry-leading headsets.
- Compatible with leading radio systems using legacy and modern radio connectors.
- Configurable dimming on LED brightness and operator-initiated blackout.

WOLF TALK CORE KIT (P/N : KIT-06618)

- Wolf Talk Module (ASY-06768)
- 6 Operator Push to Talk (PTT) units (ASY-06767)
- 6 PTT connection cables (CBL-06930-01)
- 6 PTT headset dongles (P/N varies based on headset)
